

## Force Chart

- Force is the dynamic power which is exported longitudinally through a hose, towards the ends.
- This is calculated by multiplying the area of the ID times the working pressure being used.
- Area of a circle =  $r^2 \times \text{PI}$  (3.1416)
- Force = Area x Pressure
- Example: 3" hose operating at 500 PSI =  $(1.5^2 \times 3.1416) \times 500 \text{ psi} = 3,534 \text{ PSI of Force}$

Hose ID	25 PSI	50 PSI	75 PSI	100 PSI	150 PSI	200 PSI	250 PSI	300 PSI	500 PSI	1000 PSI
